

Holly's Platform Hub — build digest, Sep 5 2026

The mastery of being centered, and the life of abundance that follows

Jack Polo · draft, Movement One · September 2026

HOLLY DOC — build digest (Sep 5 2026)

Source: "HOLLY — Wonderstorm Platform Development Hub (Sep 5 2026 pull).md" (6,220 lines). Tabs in order: Meeting Notes & Direction · Core Skills Platform · Math · Grammar Gym · AI Tutor & Writing Coach · AI Faculty · Design Constraints (= the "Learning Engine" tab) · Holly's Notes · Wonderstorm Demo Site · Development Principles.

Two things to know before reading: - **Math, Design Constraints and Development Principles have NO "HOW TO USE THIS TAB" line.** Only Core Skills, Grammar Gym, AI Tutor and AI Faculty do. - Grammar Gym says "Where this tab and START HERE disagree on scope or dates, START HERE wins." **There is no START HERE tab in this pull.** Ask Holly for it.

Her governing rule, everywhere: **"Architect for the destination. Build only the next step."**

0. Meeting Notes & Direction (opening note, Sat Sep 5)

Verbatim: "During today's meeting, Saturday September 5th, we uncovered some other things that get to be added and adjusted on the platform."

How the tabs fit (verbatim): Core Skills = "the learning engine"; AI Tutor = "how a Leader gets unstuck, and how we evaluate whether the tutoring is actually good"; AI Faculty = "who is doing the teaching, and why a Leader wants to come back"; Learning Engine = "the screen-minimal, neuroinclusive design mandate that constrains all three"; Grammar Gym = "the one piece of structured literacy we deliberately keep on the screen, and why."

1. Core Skills Platform

HOW TO USE (verbatim): "This is the long-term architecture for the learning engine: mastery, the knowledge graph, courses versus skills, and the academic evidence layer. It is not the current build. Use it to make sure the data model you write this month does not block any of it. Sections 8 through 12, on college-preparatory coursework, are architecture only. Do not build toward A-G now."

BUILD NOW (DATA-MODEL CONSTRAINTS ONLY — NOTHING HERE IS A FEATURE TO SHIP)

1. Learning loop the model must support: `HOOK → DISCOVER → EXPLAIN → TRY → FEEDBACK → ADAPT → MASTER → APPLY → CELEBRATE → NEXT`. 2. Knowledge graph shape: `courses → units → concepts → skills → prerequisites → mastery relationships`. 3. Error taxonomy (five kinds, must not get the same intervention): careless mistake · procedural mistake · conceptual misunderstanding · missing prerequisite · understands but needs practice. 4. Help escalation: `small hint → visual clue → guiding question → analogous example → partial solution → complete explanation`. 5. §4: Core Skills tracking and the engine are ONE system. "I don't want Leaders manually reporting information that the platform already knows." Leader view = Where am I? / What am I working toward? / What have I mastered? / What do I need to do today? / What's next? Coach view = "Pace, time on task, attempts, accuracy, mastery, prerequisite gaps, hint usage, repeated misconceptions, stalled progress and situations requiring human intervention." 6. §9: separate **skill** ("Solve systems of linear equations") from **course** ("Algebra I") in the schema. Course record needs: `scope and sequence → standards → learning objectives → instructional content → practice → assignments → assessments → grading methodology → mastery requirements → evidence of student work → completion requirements → final grade/credit`. "Please make sure the data architecture doesn't collapse all of these things into generic 'lessons.'" 7. §11

assessment integrity fields to leave room for: "assessment attempt history, question variation/randomization, timestamps, mastery thresholds, cumulative assessments, reassessment rules, evidence of work." 8. Ages 5–18; engine consistent, presentation matures.

ARCHITECTURE-ONLY / LATER

§8 A-G design · §10 academic evidence record (Course / Academic year / Start-completion dates / Status / Final grade / Credit / Units / Skills / Major assessments / Projects / Coach oversight + audit trail) · §12 external recognition (A-G list, course publisher, dual enrollment, Quality Matters/WASC) · cinematic video · simulations · transcripts · adaptive algorithms · meaningful gamification (§6) · real-world application (§7). §13: prove the engine in **math first**.

"TELL JACK" LINES (VERBATIM)

- "One additional thing I would tell Jack verbally ... 'Architect for the destination. Build only the next step.' That should almost become a development rule." - "Jack's AI should maintain two separate concepts: NOW: What does Wonderstorm actually need operational for Core Skills this year? ARCHITECTURE: What decisions today would be expensive or impossible to change if this eventually becomes a full instructional and credentialable learning platform?" - "Authentication architecture, learner records, course/skill separation, mastery data, assessment history, standards mapping and evidence retention belong in the second category and warrant thinking ahead. Cinematic video production, AI tutors, sophisticated simulations, every A-G course, transcript generation, adaptive learning algorithms and publisher accreditation do not all need to exist in V1."

2. Math

HOW TO USE: none on this tab. It is two documents: a curriculum overview (with the mastery-rule exchange) followed by "WONDERSTORM MATH — Full K–12 Mastery-Based Curriculum Build Specification" (57 numbered sections). Treat the 57 as the spec.

THE 13 LEVELS (+ OPTIONAL 13TH)

Level	Name	Transcript ref	Strands	Topics	Count
1	Mathematical Foundations	Kindergarten Mathematics	10	~103	1
2	Number Relationships & Mathematical Thinking	Grade 1 Mathematics	9	~87	2
3	Place Value & Strategic Arithmetic	Grade 2 Mathematics	7	~78	3
4	Multiplicative Thinking	Grade 3 Mathematics	9	~87	4
5	Multi-Digit Arithmetic & Fraction Foundations	Grade 4 Mathematics	7	~62	5
6	Fractions, Decimals & Numerical Fluency	Grade 5 Mathematics	8	~65	6
7	Rational Numbers & Proportional Reasoning	Grade 6 Mathematics	8	~63	7
8	Pre-Algebraic Reasoning	Grade 7 Mathematics	7	~56	8
9	Algebra Foundations / Pre-Algebra	Pre-Algebra / Grade 8	10	~61	9
10	Algebra I	Algebra I	10	~73	10
11	Geometry	Geometry	14	~118	11
12	Algebra II	Algebra II	16	~99	12
13	Advanced Functions, Trigonometry & Precalculus	Precalculus	13	~94	13 (optional)
13th	Calculus	Calculus, optional advanced level	7	~38	

Strand/topic counts are from build-spec §19–32 (bulleted topics per strand heading). Portal shows only "Math Level 6 • 63% Mastered" — never grade labels. "Level 11 / Algebra II is the point I would consider Wonderstorm's core high-school math requirement complete."

BUILD NOW — THE RULES, VERBATIM NUMBERS

1. **Architecture (§3):** `Level → Domain → Concept → Skill → Lesson → Practice → Mastery`. Not `Grade → Chapter → Lesson → Test`. Granularity target: "15–20 domains → 60–100 concepts → 120–200 individual skills" per level, packaged into "approximately 100–140 learner-facing lessons."

2. **Database fields per skill (§4), minimum:** Level · Domain · Concept · Skill · Prerequisite skills · Instructional objective · Mathematical vocabulary · Conceptual model · Worked examples · Guided-practice problem bank · Independent-practice problem bank · Application problem bank · Reasoning/problem-solving problem bank · Assessment problem bank · Difficulty tags · Mastery status · Attempt history · Error type · Guide-support status · Spiral-review schedule. "Every problem should also be tagged to the individual skill or skills being assessed. One problem can assess more than one skill."

3. **Mastery threshold (§5):** "90% OR HIGHER" on lessons, concept checks, quizzes, unit assessments, cumulative assessments, course/level assessments. Below 90% = "Not Yet Mastered" — "This should never be represented as failure."

4. **Workflow (§6):** `Learn → Guided Practice → Independent Practice → Mastery Check → Repair if Necessary → Master`. 5. **Reset logic (§7):** 1. Preserve the original attempt. 2. Preserve the original score. 3. Identify every incorrect response. 4. Identify the specific skill per incorrect response. 5. Create a targeted reset. 6. Reteach or review the missed skills. 7. New equivalent problems testing those skills. 8. Recalculate mastery. 9. Repeat until mastery. Example: 25 problems, 21 correct, 4 wrong = 84% → Not Yet Mastered → "The leader should not repeat all 25 problems."

6. **Reset problems are NEW problems (§8):** " $\frac{3}{4} + \frac{2}{5}$ " resets as " $\frac{5}{6} + \frac{3}{8}$ ". Earlier note: "if a leader originally gets 18/20 correct, they should not be able to answer the same two problems correctly on a reset and have the system treat that as proof of mastery."

7. **Guide intervention (§9):** "More than two resets on the same lesson, concept or repeatedly missed underlying skill automatically triggers a Guide notification. After the third unsuccessful attempt, the learner's status should become: Guide Support Needed." Notification fields: leader name · current Wonderstorm level · domain · concept · specific skill · original score · reset scores · number of attempts · incorrect problem types · recurring error pattern, if detectable · previous related skills · suggested intervention. Header

text: "Math Challenge Flag". 8. **Mastery states (§10), seven:** Not Attempted · Learning · Practicing · Not Yet Mastered · Guide Support Needed · Mastered · Mastery Refresh Needed. (§36 adds an internal flag "Mastered by Diagnostic". §45 adds "Level Mastered", recorded permanently.) 9. **Retained mastery (§11):** previously mastered skill showing repeated errors in spiral review → "Mastery Refresh Needed"; original achievement is not erased. 10. **Spiral review (§12):** "60% current concept / 25% recent review / 15% long-term review." Expanding intervals: "2 days · 1 week · 3 weeks · 6 weeks · 3 months." "Incorrect review responses should shorten the interval again." 11. **Three types of mastery (§13):** Conceptual · Procedural · Applied. "Major concepts should contain problems representing all three dimensions." 12. **Problem design (§14):** Guided practice "Approximately 4–8 scaffolded problems". Independent "20–25 independent-practice problems". A 25-set: "8 direct computation/skill problems · 5 varied representations · 4 cumulative review problems · 4 real-world/application problems · 2 error-analysis problems · 2 higher-order reasoning/challenge problems." "Depth is more important than hitting a fixed number." 13. **Prerequisite graph (§37):** "A leader should not enter a skill whose required prerequisites have not been demonstrated unless the Guide deliberately overrides the sequence." 14. **Core / Extension / Challenge (§38):** "Challenge problems should not block progression unless specifically identified as core." 15. **Lesson experience (§39), eight steps:** Launch · Learn · See It · Try It With Support · Practice It · Use It · Think About It · Show Mastery. 16. **Feedback rules (§40):** "Attempt 1: identify that the answer is incorrect. Hint 1: ask a directional question. Hint 2: highlight relevant information. Hint 3: show part of the process. Reteach: provide worked example using different numbers. Then provide a new problem. The system should record how much help was required." 17. **Guide dashboard (§41):** leader's current level · percent of level mastered · current domain · current concept · recent lessons · scores · resets · Guide Support Needed flags · skills requiring refresh · mastery velocity · amount of work completed · skipped/mastered-by-diagnostic skills · long-term weak areas · long-term strengths. Must distinguish "temporary mistake" from "recurring mathematical gap." 18. **Leader dashboard (§42):** Current Level ·

Current Mission / Concept · Level Progress · Recent Mastery · Skills to Refresh · Next Available Skills. "Avoid overwhelming younger leaders with dozens of percentages." 19. **History never overwritten (§43):** e.g. "Attempt 1: 76% / Reset 1: 84% / Reset 2: 92% / Status: Mastered." 20. **Unit/domain tests (§44):** 90%+; "Any missed areas trigger targeted remediation. Do not automatically repeat the entire test." 21. **Level completion (§45):** "all required core concepts are mastered at 90%+ · required domain assessments are mastered · cumulative review demonstrates sufficient retention · no unresolved Guide Support Needed flags remain · final level assessment reaches 90%+." Then "Level Mastered is recorded permanently. The leader immediately gains access to the next level." 22. **Artificial completion (§47–48):** score "by skill tag in addition to total score"; critical skills (basic add/sub, multiplication facts, long division, fraction operations, integer operations, solving linear equations, factoring, function interpretation) "cannot all be missed" — a 90% overall doesn't mark a missed critical skill mastered. 23. **Calculator policy (§49):** Early arithmetic: "No calculator, except accessibility needs or specific calculator lessons." Middle levels: "may be used when calculation is not the skill being assessed." Algebra: "Used selectively." Geometry: "for appropriate trig or numerical calculations." Algebra II and Precalculus: "Scientific/graphing calculator becomes an explicit mathematical tool." 24. **Fact fluency (§50):** addition, subtraction, multiplication through 12, related division, fraction/decimal/percent conversions, perfect squares, square roots — no speed-competition culture. 25. **System logic (§56):** 90%+ → Mastered → add to spiral review → unlock next skill. Else → identify missed tags → reteach → new problems → reset missed only → "More than two resets?" YES → Guide Support Needed → notify → diagnostic history → intervention → new attempt.

ARCHITECTURE-ONLY / LATER

§33 financial math strand · §34 real-world contexts · §35 placement diagnostic ("eventually") · §36 test-out · §51 manipulatives (CRA) · §52 tagged vocabulary · §53 de-emphasize Roman numerals / check-writing · Level 13 Calculus ·

Mathematical Communication and Problem-Solving as permanent strands (content, not engine).

"TELL JACK" LINES (VERBATIM)

- "I would give Jack this as a hard requirement." (the Learn / Guided / Independent / Mastery check / Intelligent response structure) - "If Wonderstorm makes lessons shorter and cleaner, Jack must not accidentally remove the repetition responsible for fluency." - "What I would tell Jack is non-negotiable: The curriculum should not be constrained to 18 chapters $\times$ 8 lessons simply because Teaching Textbooks is organized that way. Teaching Textbooks is our scope reference, not our architecture." - "I would add this to Jack's specification almost verbatim: Wonderstorm Math Mastery Rule — A leader has mastered a math lesson, concept check, quiz, or test only when they score 90% or higher." - "I would have Jack use four states" (Not Attempted / In Progress / Not Yet Mastered / Mastered, "possibly a fifth internal state: Guide Support Needed") — superseded by the seven states in §10. - "I would make this one of the explicit non-negotiables in Jack's build document because it determines the assessment engine, reset logic, Guide notifications, learner progress displays, and database structure." - §55 "THE CORE PRINCIPLE FOR JACK": the database must know "What does this learner know? What does this learner almost know? What specific misconception is getting in the way? What prerequisite is missing? What does the learner need next? Has the learner retained what they previously mastered?"

3. Grammar Gym

HOW TO USE (verbatim): "This is your primary spec. Sections 5 through 14 define what to build now. Section 26 names exactly what version one is. Sections 16, 17, 24 and 25 are in scope for planning but not for version one. Where this tab and START HERE disagree on scope or dates, START HERE wins."

§26 version one (verbatim): "the placement diagnostic, Levels 1 through 3 of the Sentence Track, the six-part daily loop, mastery states, the prerequisite graph for those levels, and the Coach dashboard. One studio, not all four." NOT in v1: "the Word Track, automatic error harvesting from authentic writing, sentence visualization, the full eight levels, and the literacy safety net beyond a stub. Architect for all of them. Build none of them yet."

BUILD NOW (§5–14)

1. **Session length:** "roughly fifteen to twenty minutes," one skill, then leave. "Do not build another portal a child spends an hour inside." 2. **Levels (§5), no grades anywhere** ("Not in the interface, not in the data model, not in anything Nova generates, not in a progress report"): Level 1 The Complete Thought · 2 The Expanded Sentence · 3 The Connected Sentence · 4 Agreement and Reference · 5 Punctuation as Meaning · 6 Sentence Craft · 7 Style and Emphasis · 8 Rhetorical Control. "A Level is a headline, not a gate" — the graph decides next. No leaderboard. Internal-only crosswalk Levels → grade-equivalent "available to me and to Coaches for records purposes only. It never surfaces to a Leader. Build it once, quietly." 3. **Placement (§6):** "a short adaptive diagnostic"; "Age controls the presentation. Mastery controls the content." Result reads "here is where your training starts, never as a score, a percentile or an implied grade." 4. **Scope & sequence (§8), seven domains mapped to the levels:** Foundation (words, phrases, complete thoughts, subject and predicate, nouns and verbs, sentence boundaries, capitalization and end punctuation, fragments and run-ons) ·

Building richer sentences (adjectives, adverbs, articles, pronouns, objects, prepositions / prepositional phrases, conjunctions, compound subjects and predicates, sentence expansion) · Connecting ideas (compound sentences, coordinating conjunctions, independent / dependent clauses, subordinating conjunctions, complex, compound-complex) · Greater grammatical control (verb tense, subject-verb agreement, pronoun-antecedent, possessives, relative clauses, adjectival / adverbial phrases and clauses, modifiers, verbals) · Punctuation as meaning (commas, series, introductory material, clauses, compound sentences, quotations / dialogue, apostrophes, colons, semicolons, dashes and parentheses) · Sentence craft (variety, combining, expanding, redundancy, parallel structure, modifier placement, emphasis, rhythm, transitions, clarity, concision) · Advanced writing control (active / passive, sophisticated clauses, rhetorical punctuation, intentional fragments, syntax for emphasis, rhythm, cohesion). v1 = first three domains (Levels 1–3). Lexia Core5/PowerUp appendix = completeness check only.

5. **Daily loop (§9), six parts with minutes:** "1. RETRIEVE. One to three minutes." · "2. DISCOVER. Two to four minutes." (notice pattern before naming rule: "The dogs runs outside. / The dogs run outside.") · "3. TRAIN. Five to seven minutes." (choose, sort, repair, combine, rearrange, punctuate, expand, reduce, identify, compare, rewrite, explain) · "4. USE IT. Three to five minutes." ("The Leader must produce language, not identify it.") · "5. PROVE IT. One to two minutes." ("One or two fresh transfer items. No hints unless needed.") · "6. DONE." ("Gym complete. Leave the screen.")

6. **Minimum effective practice (§10):** "If five well-chosen problems establish understanding, do not require twenty." Instrument it: "Track the relationship between practice volume and retention at thirty days."

7. **Mastery states (§11), five:** "Not Introduced, Learning, Practicing, Mastered, Needs Refresh." Retrieval scheduling: "Spaced intervals, expanding on success and contracting on failure, with Needs Refresh triggered by elapsed time and by errors observed in authentic writing. Nova should propose the actual scheduling model."

8. **Prerequisite graph (§12):** e.g. no compound sentences without independent clauses; no relative clauses without pronouns and clauses; no comma-with-dependent-clause without sentence structure; no sentence variety

while still producing fragments. 9. **Error taxonomy (§13), nine kinds:** Terminology confusion · Concept misunderstanding · Misidentified sentence boundary · Agreement error · Punctuation misconception · Careless mistake · Prerequisite gap · Can identify but cannot produce · Can produce but cannot explain. "The next problem responds to the actual error." 10. **Writing Mentor in the Gym (§14):** same character, rule "Make the writer better, not the writing better for them." Run-on example: "You have two complete thoughts here trying to share one sentence. How could you connect them?" → "You have three options. Separate them, join them with a coordinating conjunction, or show that one idea depends on the other. Which do you want?" 11. **Coach dashboard (§23, named in v1):** "Current Level. Skills Mastered. Skills Developing. Persistent Weaknesses. Recent Growth. Repeated Misconceptions. Intervention Needed. Observed in Authentic Writing." 12. **Evidence of mastery (§22), four forms:** Recognition · Repair · Construction · Transfer. 13. **Neuroinclusive default (§18):** one system; "If the skill being assessed is punctuation, the system does not insert the punctuation for them." 14. **Data policy must be written into the spec (§15):** "What gets stored, for how long, who can see it, and what families are told."

PLANNING-SCOPE (§16, 17, 24, 25) / LATER

§16 Word Track (spelling, syllables, morphology, roots/affixes) sharing the 15–20 min; Sentence Track keeps priority; "present at two sessions a week" minimum · §17 readiness gate ("can read a simple sentence independently and write one legibly") — before that a guide delivers it in person and the platform only tracks · §24 Literacy Safety Net diagnostic map (phonemic awareness → composition), stub only in v1 · §25 evidence: baseline writing sample scored on "sentence completeness, sentence variety, punctuation control, agreement, clarity"; Gym mastery + "retention at thirty days"; error-rate trend in real writing · §15 inward error harvesting ("Never display a Leader's own weak sentence back to them") · §19 sentence visualization.

OPEN QUESTIONS SHE OWES (§27)

Where the 15–20 min sits (studio vs home) · offline / printable version or "four digital sessions and one applied in real writing" · whether Level names travel to families — "Tell me if that creates a problem on the records side."

4. AI Tutor & Writing Coach

HOW TO USE (verbatim): "Sections 1 through 7 are the tutors we studied. Sections 8 through 18 are the behavior I want. Sections 19 through 22 are how we measure whether we got it. For the current build, sections 8, 9, 10 and 13 are the ones that matter, because they define how the Gym responds when a Leader is stuck or wrong. Read the rest for context. Section 22, the Tutor Lab, is not a separate project. It is how we evaluate Grammar Gym."

BUILD NOW (§8, 9, 10, 13)

1. **Help ladder (§8), eleven steps:** 1. Orient ("What is the problem asking you to find?") · 2. Activate prior knowledge · 3. Ask a strategic question · 4. Give a small hint · 5. Give a stronger hint · 6. Offer a visual representation · 7. Provide a simpler analogous problem · 8. Work through part of the problem together · 9. Model a similar example · 10. Explicitly reteach the underlying concept · 11. Return responsibility to the Leader ("solve a new analogous problem independently"). 2. **Answer policy (§9):** not "NEVER GIVE THE ANSWER." Core rule: "Never do cognitive work the Leader is capable of doing themselves. But when they genuinely lack prerequisite knowledge, teach them." 3. **Stop condition (§10):** "Solve it → Explain it → Transfer it." Feeds the mastery engine. 4. **Protect voice (§13), technical requirement:** track vocabulary, sentence patterns, humor, interests, strengths, recurring weaknesses; keep "Original → Feedback → Leader Revision → Final" history.

ARCHITECTURE-ONLY / LATER (STILL READ)

§11–12 writing-stage behaviors (Drafting: "Stay out of the way"; Editing: "identify → explain → let Leader correct") · §14 writing profile (Argumentation, Evidence, Organization, Sentence fluency, Conventions, Voice) · §15 Learner Model (current skill, mastery estimate, prerequisites mastered, known gaps, recent mistakes, misconceptions, preferred explanation modalities, hint history,

course position, writing strengths / growth areas, recent evidence) · §16 events — "think about this event architecture now": `misconception\_detected, hint\_level\_1\_used, visual\_explanation\_used, prerequisite\_gap\_detected, concept\_retaught, independent\_transfer\_success, mastery\_evidence, writing\_feedback\_given, student\_revision\_completed, coach\_intervention\_recommended` · §17 **escalate to Coach when:** stuck after multiple approaches · frustration escalating · AI uncertain · significant prerequisite gap · judgment beyond confidence · academic integrity · interaction has become relational / emotional · §18 praise "thinking, strategy, persistence, revision and independence, not intelligence" · §20 metrics (Time to unstuck, Hint depth, Independent transfer, Misconceptions resolved, Repeat misconception rate, Mastery after tutoring, Help dependency, Coach escalation rate, Writing revision quality, Independence over time).

EVALUATION (§19 SCORECARD, §22 LAB)

Eight tests, scored 1–5: 1 Socratic restraint · 2 Misconception recovery · 3 Voice and conversational quality · 4 Mastery gating (Solve / Explain / Transfer) · 5 Developmental appropriateness (6 / 12 / 17-year-old) · 6 Subject depth · 7 The Cheat Test · 8 Independence gain ("the most important"). Lab: "four to six Leaders across different ages and abilities" on Khanmigo and Synthesis Tutor; "Watch the Leader, not the demo."

5. AI Faculty

HOW TO USE (verbatim): "This one is later, not now. It describes who is doing the teaching, not what we are building this month. The single thing to carry into the current build is the Writing Mentor rule: make the writer better, not the writing better for them. Do not build mentor personalities yet."

BUILD NOW

1. The Writing Mentor rule only.

LATER

Character list (examples, "not final personalities"): **Math Mentor** ("Precise, calm, playful, pattern-oriented and intellectually demanding") · **Science Mentor** ("Curious, experimental and energetic") · **History Mentor** ("A compelling storyteller") · **Writing Mentor** ("Perceptive, thoughtful and deeply protective of the Leader's own voice") · **Entrepreneurship Mentor** ("Practical, challenging and action-oriented"). Writing may split into Writing Coach / Editor / Story Mentor modes. Teaching DNA profile fields: Identity · Core temperament · Teaching beliefs · Signature questions · Preferred teaching modes · Challenge style · Encouragement style · Response to mistakes · Subject-specific misconceptions · Escalation behavior · Voice/style boundaries. Build order: "1. Subject expertise 2. Pedagogy 3. Personality 4. Learner context 5. Tutoring behavior 6. Voice and visual identity." First version when it comes: "two deliberately different mentors ... Math Mentor and Writing Mentor." Design test: "If we removed the mentor's name from the screen, could a Leader tell which professor they were talking to?"

6. Design Constraints (the "Learning Engine" tab)

HOW TO USE: none. Standing constraints. Optimize "Screen Minutes to Mastery" and "Offline-to-Online Learning Ratio", never engagement. Loop `UNDERSTAND → INTERACT → PROVE → LEAVE → DO → RETURN`. Banned: infinite scroll, autoplay, constant novelty, unnecessary animation, loot-box psychology, attention-grabbing notifications, artificial streak anxiety, rewards for staying online. UDL by default (no Dyslexia/ADHD modes); inputs incl. typing, speaking, drawing, handwriting, dragging, photographing work; display controls for font size, line spacing, text spacing, contrast, reading width, audio speed, captioning, visual complexity; no speed pressure unless speed is the skill. Objective-aware accessibility (TTS off when assessing decoding; STT off when assessing mechanics). Learner Model records "what works," never labels. Four master requirements: 1 Screen-Minimal by Design · 2 Universal Design by Default · 3 Objective-Aware Accessibility · 4 Physical-World Transfer.

7. Development Principles (18 + The Development Test)

"Take precedence over convenience, automation, engagement metrics, or technical efficiency." Build-relevant: P2 "at least 90% competency", "no penalty for needing additional attempts" · P3 "Human Guides retain final authority over mastery ... reopen or confirm" · P4 "Incorrect Response → Identify Likely Misconception → Check Prerequisite Knowledge → Targeted Explanation → Worked Example → Guided Practice → Independent Practice → New Assessment", new problems not corrections · P5 "Initial Mastery → Later Retrieval Check → Longer-Term Retrieval Check → Retained Mastery" · P6 "High question miss rate → Question Review · High remediation rate → Lesson Review · Unexpected mastery decline → Prerequisite/Sequence Review · Repeated Guide overrides → Assessment or Competency Review" · P7 overrides "record the decision, reason, date, and relevant evidence" · P8 "more than two remediation/reset cycles on the same competency, the assigned Guide should be notified" · P9 Leader buttons: "I think I understand this. / This question doesn't make sense. / I think my answer should be correct. / I need help. / I want to talk to my Guide." · P10 "Domain → Strand → Concept → Prerequisites → Competency → Learning Objectives → Common Misconceptions → Learning Experiences → Assessment → Mastery Evidence" · P11 cross-reference math to California Mathematics Standards and Framework + Common Core · P14 per data category: "Why do we need this? How does it benefit the Leader? Who can see it? How long should it exist? Could this information unfairly influence how someone sees this Leader later?"

8. Holly's own to-dos (verbatim, "not build direction")

"Read Jack's OMG doc" · "Get Jack a breakdown of the core skills for each studio/level" · "Explain our move with language arts away from lexia ... I need to fill a gap of online gamified grammar practice." · "Built in assessments for leaders (Shadow Day Experience)" · "Clear Studio/Level Core Skills List - This will help Jack, Gheric & Nova understand the progression and what each leader should be seeing on their portal based on their age/level/studio."

Demo site on record: <https://the-branding-guru.github.io/wonderstorm/> (PW: wonderstorm).
