

WONDERSTORM ACADEMY × STARHUB STUDIOS

Every problem you named – solved by design.

Each row came from your own meeting notes, documents, and requests — matched to what was built, with conservative expectations and the mechanism behind them.*

The problem (yours)	What we built	Expected lift*
Parents inquire — then go cold waiting	Instant response → guided inquiry → tour booking → automatic follow-up	+30–50% tours booked
A website that describes but doesn't convert	Parent-initiation journey: recognition → evidence → visit	2–3× site conversion
Holly & staff answering messages one at a time	The platform answers first — FAQ intelligence, guided paths, self-serve tour scheduling	10–20 hrs/week returned
Families arrive at tours unsold	Hero journeys, chronicles & parent portal pre-sell the method	+20–30% tour→enroll
Constant content invention for social	The storytelling engine — school life becomes the feed	3–4× publishing consistency
Word-of-mouth strong but unmanaged	Witnessed growth — shareable chronicles parents pass along	+15–25% referral flow
Ten disconnected tools, no single picture	One operating layer + a monthly measurement report	Baseline in 30 days
Differentiation — why Wonderstorm?	O.M.G. + social-skills intelligence in the curriculum — first school in the country	Category of one

**Conservative industry benchmarks for instrumented enrollment funnels — not promises. Month one establishes YOUR baseline; every number is then tracked against reality in the monthly report.*

THE FULL SCOPE

What the partnership actually delivers — far more than a website.

1

The platform — market replacement value \$250,000+

Complete website rebuild as a conversion instrument — plus three dedicated applications: the **Hero portal** (student quests, goals, reflection, chronicles), the **Coach portal** (coach tools, field notes, witnessed growth), and the **Parent portal** (the family's window into their child's becoming). Enrollment journey, tour booking, FAQ intelligence, communications — one operating layer. Wonderstorm's founding-partner recovery principal: **\$50,000** — a deep founding discount against conservative market replacement.

2

Growth operations (ongoing)

We run your **ad spend** — campaign design, targeting, creative, weekly optimization against real conversion data. Continuous **updates to the site and all three apps** as the school evolves. **Content creation** from the storytelling engine: Quest of the Week, A Hero's Becoming, Coach's Field Notes — produced with you, published on rhythm.

3

Marketing strategy — phased, gated, measured

A full marketing layout in **phases with gates**: no phase starts until the last one proves itself in your monthly report. Strategy, positioning, funnel design, referral architecture — the whole go-to-market for the school, run like an instrument, not an opinion.

4

The intelligence layer

The platform learns your school: what parents ask, where families disengage, which stories convert. Every month the system gets more precise — and Wonderstorm remains the **first school in the country** with this intelligence woven into daily operations.

THE PLAN

Phased, gated, measured – and it pays for itself.

The phases & gates

Phase	What happens	The gate to the next phase
1 • Foundation (days 1–30)	Platform live, portals open, baseline instrumented, first campaigns on	Baseline report delivered; speed-to-lead < 5 min proven
2 • Conversion (mo. 2–3)	Funnel optimization, storytelling rhythm, referral engine on	Tour bookings + tour→enroll trending above baseline
3 • Growth (mo. 4–6)	Scaled ad spend, waitlist building, community events engine	Enrollment target hit; ad spend paying for itself
4 • Expansion (mo. 7+)	New revenue streams: digital quests, memberships, curriculum licensing	Partnership revenue share in full flow

◆ **How it's paid for – the seat costs nothing to hold**

The platform goes live and pays for itself — by a rule, not a rate: we won't name a percentage of your tuition until we know what a seat actually earns you, because a share above your margin would mean every child we bring costs you money — and we won't build that. The commitment up front: recovery is capped at one-third of your margin on enrollments the system creates, the \$50,000 founding-partner principal is fixed — against a platform whose conservative market replacement value exceeds \$250,000 — and the receipt is visible the day it clears. After that, the standard partnership share applies only while we're actively growing you. No bill, no invoice, no check. If it never generates a dollar, you never owe one.

THE HONEST MATH

How the money works – plainly.

1 The retainer pays for itself

The platform returns **10–20 staff-hours every week** — that’s \$2,000–\$4,000/month of payroll time already being spent on messages, follow-ups, and social. The technical-partner retainer is priced **below that saving** — so from month one, Wonderstorm keeps more cash than it does today. It isn’t a new expense; it’s a discount on an existing one.

2 Marketing starts free, ads earn their way in

Phase 1 spends **zero ad dollars** — the storytelling engine, referral architecture, and instant-response funnel harvest the demand you already have. Paid ads only switch on at the gate where new revenue is flowing to fund them. The system never asks for fuel it hasn’t already generated.

3 · Each revenue stream splits by who built it

Stream	Whose it is	The split
Existing tuition — your students today	Yours entirely	100% Wonderstorm. We never touch it.
Net-new enrollments the system fills	Created together	Recovery takes no more than one-third of the contribution margin on enrollments the system created — it can never make a student unprofitable, at any margin — until the fixed \$50,000 founding-partner principal is recovered (market replacement value \$250,000+; visible completion receipt; the monthly report projects the clearing date); then 20% on StarHub-attributed new revenue while growth operations are active
New digital streams — courses, memberships, quests	Built together: our platform, your method	50 / 50 partners
Platform licensing to other schools (the Acton network)	Our technology, your flagship story	Majority StarHub — and Wonderstorm earns a flagship share on every school, for being the proof

The number that makes it concrete: open seats × tuition = the revenue sitting in the building. First thing we measure together.

THE PARTNERSHIP

What each side brings – both visible, both valued.

What StarHub brings

The platform (\$250,000+ market replacement value, carried at a \$50,000 founding-partner principal — already delivered), three portals, ad management, content engine, phased marketing, continuous updates (\$19,000–\$40,000/month market equivalent) — at our risk, recovered only from revenue the system creates.

What Wonderstorm brings

The flagship story — first school in the country with this intelligence — the Acton-network proof case, and **your community's trust**: introductions to the parents and founders who believe in what you've built. That is real capital, and we value it as such.

CHECK US

Don't take our word for it – every claim here is checkable.

What this page claims	How you confirm it yourself — before you sign anything
The platform is built , not proposed	Ask for a walkthrough on your school's real data — not a demo account. If it can't run on Wonderstorm's actual programs and families, it isn't built yet.
Recovery can never make a student unprofitable	We do the margin math with you, on your numbers — your tuition, your cost per seat — and you keep it. If our arithmetic doesn't survive your accountant, the term is wrong, not your accountant.
Attribution is bounded and honest	You see the inputs , not just the total. Every enrollment we claim shows its evidence. Disputed or unknown cases are excluded — never counted our way by default.
You can leave with everything	Ask for the export package now , before signing — then open it without us in the room. An exit that has never been tested is a claim; one you've opened yourself is a fact.
The trailing share earns its keep	It is tied to active growth operations . If we stop operating, improving, and measuring, it stops too. Ask us to put the stop condition in writing.
Declining costs you nothing	Say no and the work already delivered stays delivered. Nothing activates, nothing bills, no clock starts. We make no claim that Wonderstorm loses its edge by passing — that would be a threat wearing a forecast's clothes.

What we can't verify for you: whether this works for your families. Built, tested, and witnessed — yes. Proven in your building — not yet. That one only reality can answer, and we'd rather you hear it from us first.

And three documents carry the depth this page deliberately does not. The **First Activation Work Order** — what a first yes authorizes, the seven preconditions that gate it, and everything it pointedly does not authorize. The **Sovereignty Schedule** — data ownership, role authority, AI use, attribution, export, termination, credential custody, participant rights, repair, and surviving obligations, each answered in writing. The **Economic Constitution** — the recovery principal, margin definition, attribution rule, disputes, trailing term, and sunset, with worked examples agreed before money can make them adversarial. They are drafts, they are ours to be held to, and they are meant to be read **before** you decide.
