

Every problem you named. Solved, by design.

Each row below came from your own meeting notes, documents, and requests — matched to what was built, with conservative conversion expectations and the mechanism behind them.

THE PROBLEM (YOURS)	WHAT WE BUILT	EXPECTED LIFT*	WHY IT WORKS
Parents inquire — then go cold waiting for a reply	Instrumented enrollment journey: instant response, guided inquiry → tour booking, automatic follow-up	+30-50% tours booked	Speed-to-lead is the single biggest conversion lever — families contact 3 schools; the first real response wins the tour
Generic website that describes, but doesn't convert	Parent-initiation journey (recognition → possibility → evidence → participation → visit) replacing the brochure site	2-3× site conversion	Typical school sites convert 2–3% of visitors; purpose-built journeys with proof and a single next step reach 6–10%
Holly & staff answering social messages one at a time	The platform answers first: FAQ intelligence, guided paths, tour scheduling without a human in the loop	10-20 staff hrs/week back	The repetitive 80% of inquiries are the same 12 questions — automation returns those hours to the classroom
Families arrive at tours unsold — the tour does all the work	Hero journeys, student chronicles & parent portal expose families to the method before they visit	+20-30% tour→enroll	Pre-sold families arrive deciding “which start date,” not “whether” — the tour confirms instead of convinces
Constant content invention for social media	The storytelling engine: Quest of the Week, A Hero's Becoming, Coach's Field Notes — ordinary school life becomes the feed	3-4× publishing consistency	Consistency beats creativity in local reach — a system that harvests real moments outperforms invented campaigns
Word-of-mouth is your best channel — but unmanaged	Witnessed growth: shareable chronicles & milestones parents proudly pass along	+15-25% referral flow	Charter enrollment is referral-driven; giving parents something concrete to share turns pride into pipeline
Ten disconnected tools, no single picture	One operating layer: enrollment, comms, campaigns, portals, ops — with a monthly measurement report	Baseline in 30 days	You can't improve what you can't see — the first month establishes YOUR numbers, and every claim on this page gets tested against them
Differentiation — why Wonderstorm over any other school	O.M.G. + social-skills intelligence woven into the curriculum experience — first school in the country	Category of one	Every school claims “we care.” One school can demonstrate a cognitive & social-skills intelligence layer no one else has

*About these numbers: ranges are conservative industry benchmarks for instrumented enrollment funnels — not promises. The system's first job is measuring **your actual baseline** in month one; every number above is then tracked against reality in the monthly report, and we optimize what the data says. That's the difference between this and a website: a website is an opinion. This is an instrument.
